## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-10, 14-76, drawn to method of reducing viability of microbes comprising exposing the microbes to an antimicrobial agent comprising the amino acid sequence KPV or a biologically functional equivalent thereof, classified in class 514, subclass 14-18.
  - II. Claims 1, 8-20, drawn to method of reducing viability of microbes comprising exposing the microbes to an antimicrobial agent comprising the amino acid sequence MEHFRWG or a biologically functional equivalent thereof, classified in class 514, subclass 14-16.
  - III. Claims 77-86 and 89-95, drawn to an antimicrobial agent comprising the amino acid sequence KPV or a biologically functional equivalent thereof, classified in class 514, subclass 14-18.
  - IV. Claims 77, 84-95, drawn to an antimicrobial agent comprising the amino acid sequence MEHFRWG or a biologically functional equivalent thereof, classified in class 514, subclass 14-16.
2. The inventions are distinct or independent, each from the other because:

The methods of Groups I-II are patentably distinct wherein the methods of each require different steps with different components, and wherein the modes of action are different.

The products of Groups III-IV are patentably distinct wherein the structures and modes of actions are different.

The product of Group III and the methods of Group I are distinct inventions as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be use in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the proteins of invention III can be used for immunoassays or as molecular weight markers.

The product of Group III and the methods of Group II are independent wherein the methods of Group II do not require the product of Group III.

The product of Group IV and the methods of Group I are independent wherein the methods of Group I do not require the product of Group IV.

The product of Group IV and the methods of Group II are distinct inventions as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be use in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the proteins of invention IV can be used for immunoassays or as molecular weight markers.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
